Retrieval Procedure

LLM

The LLM uses the search function and finds the requested documents

01

Knowledge Graph

Filter mechanism to find the right docs (f.e. year, country, theme)

02

LLM + Knowledge Graph

Knowledge graph to find relevant documents similar to retrieved document

03

The LLM finds the needle; the graph shows the haystack around it.

Workflow

OFF-SITE · PREPARED IN EUROPE

ON-SITE · LOCAL SERVER, NO INTERNET

1 Raw data

MSF document collection: articles, press releases, reports

2 Offline processing

Text cleaning
Deduplication
Tags (country, topic ...)
Prebuilt index

3 Fast protocol search

BM25-ranked results
Local LLM support
Filters: country, topic, language

4 Download document

Original source file, with date and source shown

Local servers

Advantages

- No leak of personal data
- No vendor lock-in
- No need for internet
- Cheaper per query

Disadvantages

- Lower quality than large cloud models
- Maintenance on every site
- Physical and security risk
